Mission

To build on the Masters of Science in Nursing degree by providing focused knowledge and skills in the nurse educator role to prepare future workforce leaders.

Students Learning Outcomes

Upon graduation, students of the post-MSN NE Certificate program will be prepared to:

1. Employ cutting-edge teaching and evaluation strategies in the didactic and clinical setting. Competencies: communication, service delivery, professional role development, ethics
2. Synthesize teaching/learning theories. Competencies: critical thinking
3. Demonstrate skills in curriculum development. Competencies: collaboration, global perspectives

Post-MSN competency definitions

Critical Thinking: Critical thinking is the rational and reflective process of making judgments. This process includes analysis and differentiation of complex data sets as a basis for independent and collaborative health care decision-making.

Communication: The ability to use complex, ongoing, interactive written and verbal processes so information can be exchanged between individuals, groups, and/or systems.

Service Delivery: The ability to apply theory and research in advanced clinical practice, or to the education of professional nurses, or in managing organizations and environments.

Professional Role Development: The ability to enact the subroles of the nurse in advanced practice.

Global Perspectives: The ability to integrate individual, micro- and macro-system attributes into the delivery of health care.

Collaboration: Participate in the development of relationships in which each party contributes equitably to the decision-making.

Ethics: Participate in interdisciplinary endeavors to identify the structures related to rights, duties and responsibilities.
